

QuarkXPress Template Instructions

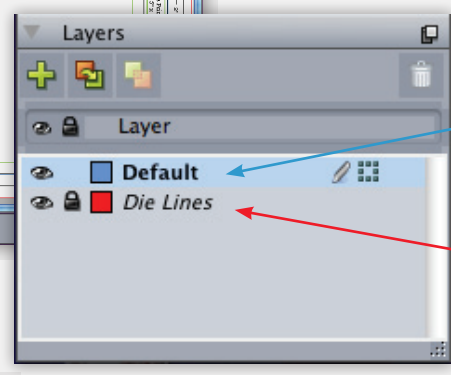

Please consult your equipment user's manual for instructions on how to run specialty paper, and equipment limitations.

Templates provided by Blanks/USA are intended to assist with proper document layout, format and setup when setting up artwork to print on Blanks/USA die cut products.

QuarkXPress templates are available as a .qxp file. The QuarkXPress templates are designed for print professionals and graphic designers; these templates show product guides and die cut lines.

This template is set-up using the Layers features.

Click on the layer "default" and design on this layer.

The die lines, safe print area and measurements are on locked "Die Lines" layer of the master page that are set to not print.

Safe Print Area

The area marked by the green line is called the safe print area. Please remember to keep all important information within this area.

Die Lines

The areas marked by a black or gray line are the die lines. We suggest aligning art and type at least 1/4" away from perforations and die cuts. Many copiers and laser printers don't pull paper completely straight.
